

Hemgenix® (etranacogene dezaparvovec-drlb)

Effective: July 1, 2024

<p>Prior Authorization Required If <u>REQUIRED</u>, submit supporting clinical documentation pertinent to service request.</p>	<p>Yes <input checked="" type="checkbox"/> No <input type="checkbox"/></p>
<p>Applies to:</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> CarePartners of Connecticut Medicare Advantage HMO plans, Fax 617-673-0956 <input checked="" type="checkbox"/> CarePartners of Connecticut Medicare Advantage PPO plans, Fax 617-673-0956 	

Note: While you may not be the provider responsible for obtaining prior authorization, as a condition of payment you will need to ensure that prior authorization has been obtained.

Overview

Hemophilia B is a rare genetic bleeding disorder resulting from missing or insufficient levels of blood clotting FIX, a protein needed to produce blood clots to stop bleeding. The cause of this is due to a mutation on the F9 gene. Symptoms can include prolonged or heavy bleeding after an injury, surgery, or dental procedure; in severe cases, bleeding episodes can occur spontaneously without a clear cause. Prolonged bleeding episodes can lead to serious complications, such as bleeding into joints, muscles, or internal organs, including the brain. Hemophilia B is classified as mild, moderate or severe based upon the activity level of factor IX.

- Individuals with mild hemophilia have factor IX levels between 5 and 40% of normal
- Those with moderate hemophilia have factor levels from 1 to 5% of normal
- Patients with severe hemophilia have factor levels less than 1% of normal

About 2/3 of Hemophilia B patients have a moderate or severe version of the condition. Diagnosis is usually at a younger age among patients with the severe (≤ 2 years) or moderate ($< 5-6$ years) form of the disorder compared with those with mild disease who are typically diagnosed later in life or in adulthood.

Food and Drug Administration (FDA) Approved Indications:

Hemgenix (etranacogene dezaparvovec-drlb) is an adeno-associated virus vector-based gene therapy indicated for the treatment of adults with Hemophilia B (congenital Factor IX deficiency) who:

- Currently use Factor IX prophylaxis therapy, or
- Have a current or historical life-threatening hemorrhage, or
- Have repeated, serious spontaneous bleeding episodes

Hemgenix is an adeno-associated virus serotype 5 (AAV5) based gene therapy designed to deliver a copy of a gene encoding the Padua variant of human coagulation Factor IX (hFIX-Padua). A single intravenous infusion of Hemgenix results in cell transduction and increase in circulating Factor IX activity in patients with Hemophilia B.

Prior to the approval of Hemgenix, standard-of-care treatment for patients with moderate to severe hemophilia included prophylaxis with FIX replacement therapy, self-administered intravenously multiple times a week.

The Plan uses guidance from the Centers for Medicare and Medicaid Services (CMS) for its Medicare Advantage plan members. CMS National Coverage Determinations (NCDs), Local Coverage Determinations (LCDs), Local Coverage Articles (LCAs) and documentation included in the Medicare manuals are the basis for coverage determinations. When CMS does not provide guidance, the Plan's internally developed medical necessity guidelines are used. CMS coverage guidelines are not established for this service. Point32Health covers Hemgenix in accordance with MassHealth coverage criteria.

For the therapy Hemgenix, evidence is sufficient for coverage. Hemgenix received FDA approval in November 2022 supported by the results of the HOPE-B phase 3 multinational, open-label, single arm trial. This study found that members annualized

bleeding rate (ABR), or bleeds per year, dropped from an average of 4.1 bleeds per year before Hemgenix to an average of 1.9 bleeds per year after Hemgenix therapy, resulting in a reduction of 54% ABR. Ninety four percent (94%) of those who took part in the trial were able to discontinue standard prophylaxis treatment with Factor IX. Hemgenix provides a one-time treatment alternative for qualified hemophilia B members as compared to frequent Factor IX infusions.

The use of this criteria in the utilization management process will ensure access to evidence based clinically appropriate care. See References section below for all evidence accessed in the development of these criteria.

Clinical Guideline Coverage Criteria

The Plan may cover Hemgenix when all of the following criteria is met:

1. The Member a diagnosis of moderately severe to severe hemophilia B (FIX activity level \leq 2% of normal).
AND
2. The provider is a hematologist or consult notes from a hematologist are provided.
AND
3. The appropriate dosing and Member weight is followed.
AND
4. The Member is 18 years of age or older.
AND
5. The Member is a biologic male/male assigned at birth (if a request is received for a female Member that meets all the other criteria, supporting documentation must be submitted).
AND
6. The Member is screened for acute infection prior to administration.
AND
7. The Member is not currently receiving immunosuppressive therapy.
AND
8. ONE of the following:
 - a. The Member currently uses FIX prophylaxis therapy.
 - b. The Member has currently life-threatening hemorrhage.
 - c. The Member has history of life-threatening hemorrhage.

Limitations

- If approval criteria are met, the health plan may authorize Hemgenix for one treatment only.
- The Plan will not cover Hemgenix for any conditions other than FDA-approved indications. All other uses are considered experimental or investigational.

Codes

The following code(s) require prior authorization:

Approval And Revision History

January 18, 2023: Reviewed by the Medical Policy Approval Committee (MPAC)

Subsequent endorsement date(s) and changes made:

- November 16, 2023: Reviewed by MPAC, renewed without changes
- November 2023: Updated CPCT logo and updated overview effective January 1, 2024
- December 1, 2023: Reviewed and approved by UM Committee effective January 1, 2024
- May 15, 2024: Reviewed by MPAC. Criteria update to align with MassHealth criteria effective July 1, 2024
- June 13, 2024: Reviewed and approved by UM Committee effective July 1, 2024

Background, Product and Disclaimer Information

Medical Necessity Guidelines are developed to determine coverage for benefits and are published to provide a better understanding of the basis upon which coverage decisions are made. We make coverage decisions using these guidelines, along with the Member's benefit document, and in coordination with the Member's physician(s) on a case-by-case basis considering the individual Member's health care needs.

Medical Necessity Guidelines are developed for selected therapeutic or diagnostic services found to be safe and proven effective in a limited, defined population of patients or clinical circumstances. They include concise clinical coverage criteria based on current literature review, consultation with practicing physicians in our service area who are medical experts in the particular field, FDA and other government agency policies, and standards adopted by national accreditation organizations. We revise and update Medical Necessity Guidelines annually, or more frequently if new evidence becomes available that suggests needed revisions.

Treating providers are solely responsible for the medical advice and treatment of Members. The use of this guideline is not a guarantee of payment or a final prediction of how specific claim(s) will be adjudicated. Claims payment is subject to eligibility and benefits on the date of service, coordination of benefits, referral/authorization, utilization management guidelines when applicable, and adherence to plan policies, plan procedures, and claims editing logic.
